FACULTY PROFILE

Department

CSU College: Safety and Emergency Services
CSU Discipline: Information Technology

Basic Info

Name: Noel Broman
Title: Part-Time Faculty
Email: Noel.Broman@columbiasouthern.edu
Personal Preferred Availability: Evenings

Education

Master of Science in Management Information Systems
Nova Southeastern University

Bachelor of Science in Information Technology/Network & Telecommunications
University of Phoenix

Biography

Background
I have been working in information technology for nineteen years, along with six years instructional and curriculum design, nine years teaching experience in higher education, ten years project management experience, and seven years as a subject matter expert in Information Technology. I have an extensive background in network management and design with research interests in telecommuting in the 21st Century, effective organizational communication, ethics in information technology, information systems security and control, cognitive learning, and quantum computing. I always try to keep up with emerging technologies, especially with how quickly they advance each and every day as we progress into the future.

Hobbies/Interests
When I am not working with technology, I enjoy listening to jazz music. I find that it is relaxing in everything I do, such as mowing the lawn or reading a book. I also enjoy going on nature hikes. Where I live in South Florida, there are all types of nature trails. I am also a fan of sci-fi movies, such as a Space Odyssey 2001.

Additional Information

Teaching Philosophy
My main goal is to develop independent, critical thinkers who are capable of solving problems beyond the classroom environment. The entire experience of education involves not only learning a particular subject area, but also acquiring lifelong learning skills. These learning skills that the students acquire will allow them to be able to adapt and learn on their own in this fast paced world. Critical and creative thinking is important to establish from the beginning. In the beginning of a course, I establish groups which will work together for specific projects or labs. This type of collaborative effort gives the students control over the entire learning process. They are able to develop their interpersonal and communication skills that are needed to be successful in today's business.

Advice for Current Students
Always ask questions if you need to.
