Hello class, my name is Louis Ephraim. I will be your instructor in this course. As your instructor, my principal interest is that you master the concepts taught so that you learn and understand the material well enough to extend and apply this knowledge to new and different situations. For many students, going over a concept or an example once or twice may not be enough to fully grasp and comprehend it. My philosophy is to allow each student sufficient time to become familiar with the topic so that he or she can potentially master it. To support students, I will give effective feedback and allow students to repeat an assignment, within the confines of the course’s timeline, until mastery is achieved. Also, I will do my best to be available as much as possible to assist with guidance and support in completing assignments.

My educational background has prepared me for this position. I have a bachelor’s degree in Computer Science from Lehman College and a Master’s degree in Mathematics from the University of Miami. With more than 15 years teaching experience, I have taught middle school, high school, adult school, community colleges and universities. Most of my professional experience is with colleges and universities. I am also a professionally certified mathematics teacher in the state of Florida.

I am excited to be your instructor as I share my infectious passion for the subject with you. I truly hope that your experience in this course is a positive one and that you leave with new and added knowledge.

Please do not hesitate to contact me regarding any questions or concerns you may have. I will do my best to help in any way I can. You may contact me as indicated below:
